(EXTRAORDINARY)

VOL. 42

Port-of-Spain, Trinidad, Monday 7th July, 2003—Price \$1.00

No. 100

1225

SUPPLEMENT TO THIS ISSUE

THE DOCUMENTS detailed hereunder have been issued and are published as a Supplement to this issue of the *Trinidad and Tobago Gazette*:

Legal Supplement Part B—

Erratum—(In respect of Legal Notice No. 40 of 2003)—(Legal Notice No. 103 of 2003).

Regulated Industries Commission (Approval of Cess) Order, 2003—(Legal Notice No. 104 of 2003).

Notice of submission for public comment on an Environmental Impact Assessment Report prepared by Continental Shelf Associates, Inc. on behalf of Eog Resources Trinidad Limited—(Legal Notice No. 105 of 2003).

1226

APPOINTMENT OF MEMBERS OF THE VICTORIA (EAST) PRINCES TOWN LOCAL PUBLIC ASSISTANCE BOARD

IT IS NOTIFIED for general information that the undermentioned persons have been appointed by Cabinet to serve as members of the Victoria (East) Princes Town Local Public Assistance Board in accordance with the provisions of section 8 of the Public Assistance Act, Chap. 32:03 of the Laws of the Republic of Trinidad and Tobago for a period of two (2) years with effect from 22nd May, 2003—

Mrs. JENNY BENGOCHEA

Ms. PEARL JAMES

Ms. UMLTA SAUNDERS

V. JONES
*Acting Permanent Secretary,
Office of the Prime Minister
(Social Services Delivery)*

June 2003.

1227

COLLECTION OF LANDS AND BUILDINGS TAXES—DISTRICT REVENUE OFFICE

(Lands and Buildings Taxes Act, Chap. 76:04)

THE PUBLIC is hereby notified that the District Revenue Offices (formerly Wardens Offices) listed hereunder will open for business on extra days in June, 2003 to facilitate the collection of Lands and Buildings Taxes:

<i>Offices</i>	<i>Days</i>	<i>Business Hours</i>
Erin	24th—30th June	9.00 a.m.—2.00 p.m.
Cedros	24th—30th June	9.00 a.m.—2.00 p.m.
Mayaro	23rd—30th June	9.00 a.m.—3.00 p.m.
Biche	23rd—30th June	9.00 a.m.—2.00 p.m.
Moruga	24th—30th June	9.00 a.m.—2.00 p.m.

S. MAHARAJ
*Acting Revenue Officer V,
St. George West, Port-of-Spain*

<p>(54) Title: SYSTEM FOR DRAINING A LIQUID STORAGE TANK</p>	
<p>(57) Abstract: The present invention relates to a system which makes it possible to remove undesirable liquids, generally an aqueous phase, which precipitate to the bottom of tanks for storing liquid products. Use is made of a drainage device (30) which comprises a concave body (31), a seat (26), and an interface float (8) which has a plug portion (25). This interface float (8) is designed to sink into the product and to float on the aqueous phase. As the level of the aqueous phase drops, the plug portion (25) settles sealingly on the seat (26), halting the drainage operations since all the accumulated aqueous phase has already been drained off. The drainage system may be automatic or manual.</p> <p>In the former case, use is made of a sensor (12) for detecting the presence of an aqueous phase and commanding the process of opening a shut-off valve (11) and allowing drainage of the accumulated aqueous phase. In the manual case, an operator periodically checks for the presence of an aqueous phase inside de storage tank (1), through a port (28) for inspecting the level. If such a phase were to accumulate, he opens a manual shut-off valve (29) so as to allow all the accumulated aqueous phase to drain away.</p>

(54) Title: POWDER FILLING APPARATUS AND METHOD
--

(57) **Abstract:** The invention provides methods, systems and apparatus for the metered transport of fine powders into receptacles. According to one exemplary embodiment, an apparatus is provided which comprises a hopper (12) having an opening. The hopper is adapted to receive a bed of fine powder (20). At least one chamber (24), which is moveable to allow the chamber to be placed in close proximity to the opening, is also provided. An element (28) having a proximal end and a distal end is positioned within the hopper such that the distal end is near the opening. A vibrator motor is provided to vibrate the element when within the fine powder.

<p>(54) Title: BURNER</p>	
<p>(57) Abstract: A burner for combusting gaseous mixture of gaseous fuel with a combustion supporting gas, such as oxygen or air, comprising a burner tube (11) open at one end (11') and closed at its other end (11'') with a flame holder (30) at which fuel is burnt adjacent the open end (11'), the flame holder (30) being traversed by passageways (52, 54, 56, 58) for the gaseous mixture, the burner (10) having inlets (14, 16) adjacent the closed end (11'') connected to combustion supporting gas and gaseous fuel supply lines, one of said lines having a control valve operable for controlling the size of the flame, the said one line having a pressure or flow transducer and the other line having a variable booster or restrictor responsive to the transducer, for balancing air and fuel supplied to the burner (10) to ensure the gaseous mixture remains stoichiometric irrespective of the size of the flame and such that the lowest gaseous fuel mixture flow rate is at least as low as 1/60th the highest flow rate of the gaseous fuel mixture each passageway (52, 54, 56, 58) having a flared exit (60) at the end nearer the open end (11') of the burner (11) each passageway being dimensioned such that at the highest obtainable flow rate of gaseous fuel mixture the flames do not lift off from the flamer holder, at the lowest flow rate the velocity of the gaseous fuel mixture at some point within the passageway (52, 54, 56, 58) is sufficient to prevent flame back through the flame holder.</p>

<p>(54) Title: METHOD OF CHARGING A PRESSURIZED CONTAINER WITH GRANULAR SOLIDS</p>	
<p>(57) Abstract: The invention relates to a method of charging a pressurized container with granular solids. According to the inventive method, the solids are first guided into a first container (10) that is subjected to an atmospheric pressure and then into a second container (20) that is located below said first container and that is subjected to a variable pressure before the pressurized container is charged with said solids. Said first and said second container have respective lower outlet channels (11) and a movable slide (2) that interacts with said outlet channels. The outlet end of the outlet channel (11) is located 20 to 400 mm above the slide (2) in the closed position and the slide, in the closed position, forms the bottom of a chamber (13) that is at least partially filled with solids. Said chamber is linked with the outlet channel in a gas-tight manner. The chamber and the slide are not shut off from each other in a gas-tight manner. The slide carries bulk solids (14) in the closed position. The outlet channel (11) and the container (10) contain a vertical solids column of at least 1 m height. In the closed position, seal gas (12) is forced from outside into the chamber and into the solids column.</p>
